

CENTRALS

CIVIL, EARTHMOVING &
MINING CONTRACTORS

Capability Statement

Civil & Mining

Centrals provides civil infrastructure services for clients operating in mining, local government, civil construction and land development throughout Western Australia.

We recognise that the continued growth and success of our company has been based on developing close, long-term working relationships with our clients, providing best value solutions and delivering ongoing support and maintenance.

Our clients trust us, and have confidence in our service abilities. They are assured that our advice and commitment to their business means high quality solution oriented results.

Long-term relationships mean we...

Build trust with our clients

Have a **better understanding** of your business needs

Can implement **targeted solutions**

Will provide **responsive, quality value for money solutions**

We **value honesty** and **take ownership**

About Centrals

Centrals is a progressive and growing company with over 32 years experience delivering and supporting civil earthmoving and mining services in regional Western Australia.

The industry leadership we have shown in providing meaningful training, employment and commercial opportunities for Aboriginal people, has resulted in Centrals being awarded the state CCF Award for Aboriginal Engagement for the last two years.

Our focus on building long-term relationships with our clients means we better understand their needs and provide personalised, best value service delivery. Centrals now have offices in Perth and Geraldton, with site offices throughout Western Australia.

Based in Geraldton since 1985, with our Perth office opening in 2018, our regional presence provides commercial advantage for our clients who need to construct, service or maintain infrastructure in regional areas and require a self reliant, flexible partner on the ground.

With 160 staff including experienced engineers, project managers, roadwork supervisors, licensed plumbers and skilled certified plant operators,

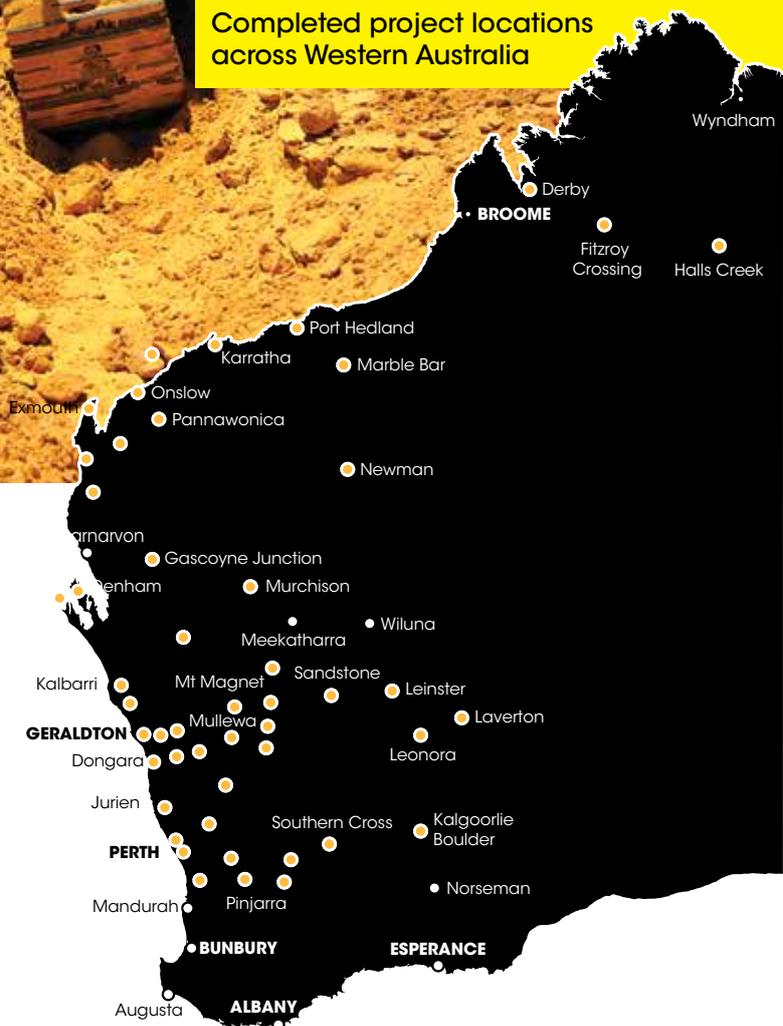

Centrals is equipped to handle significant infrastructure projects.

Our extensive fleet of late model equipment and specialist machines are maintained to the highest standards and operated by skilled, conscientious operators. We are also able to remain self sufficient onsite with our own mobile accommodation units, messing facilities, workshops, generators, fuel storage and pumps.

Centrals continued growth can be attributed to our long-term relationships with clients and contractors born from our quality focus, ability to handle complex projects, excellent systems, dedicated employees and extensive fleet of earthmoving equipment.

Completed project locations across Western Australia

As a regional based Company we understand the critical importance of giving back into the regions that we are working.

We do this by focusing on ensuring we provide employment and commercial opportunities, providing direct assistance in building the capacity of the people and the businesses in the regions.

This assists us to meet all of our clients' needs and ensures the actions we take are honourable and ethical, and helps enhance the reputation of our clients' within the community.

Aboriginal Engagement

Our Company's ongoing demonstrated commitment to providing training, employment and commercial opportunities for Aboriginal people, has meant we have become a trusted partner for Aboriginal people, Mining Companies and Government, when they seek to be able to deliver tangible outcomes for Aboriginal people as part of their project.

We are very proud that this commitment has enabled us to achieve success in establishing Aboriginal employment and training programs, the ability to assist Aboriginal businesses to set up and grow, to be able to provide business opportunities to these Aboriginal businesses, and the creation of joint ventures and in delivering real jobs and commercial opportunities.

Today, 21% of the Centrals workforce is Aboriginal. Last year it was 17%. Each year, we are committed to increasing Aboriginal participation and delivering new programs to not only get improved employment outcomes, but to foster cultural awareness among our team, building an inclusive workforce by nurturing relationships with our Aboriginal staff, their families and the broader Aboriginal community.

Delivering training and jobs is just one part of our commitment. Delivering true and lasting Aboriginal opportunities and overcoming disadvantage can only be done by also building relationships, breaking down barriers and improving cultural awareness in the community generally.

Centrals is most proud of the growth and development of the Yagahong Alliance, which is the joint venture that Centrals are in with the Yugunga Nya people who are the traditional owners of the land north east of Meekatharra. During this period we have been able to increase the percentage of Aboriginal people working for the Yagahong Alliance at the Degrussa Mine Site from 15% to 82%.

The 3 year contract with Sandfire Resources has also enabled the Yugunga - Nya Trust to be able to purchase \$1.5 million worth of equipment. As a result the Yugunga Nya people were able to increase their share in the joint venture by a further 10% during this period.

Sandfire Resources have consistently complimented the Yagahong Alliance on the safety, quality, responsiveness and reliability of the service that the onsite team provides. The onsite

team are strong and are prepared to speak up if any member of the team who are not upholding their standards. To date they have also successfully completed 2.5 years onsite with no recordable or lost time injuries being incurred.

The most astounding part of the success of the Yagahong Alliance has been how many of the Aboriginal people who were previously unemployed have then been able to flourish as a result of being given an opportunity. Sandfire Resources and Centrals

have not had to lower our expectations of the skills and the values that each of the Yagahong employees must have, we have however provided a clear pathway that initially required smaller steps.

As a result we been able to successfully train and employ Aboriginal people that have a wide range of existing skill sets that includes single mothers, long term unemployed and people that have had limited schooling.

Mining Capabilities

Surface Capabilities

- Pioneering works including Mulching, Clearing, Road and Gridline construction
- Tailings Dam Construction and Maintenance including Upstream and Downstream methodology
- Crushing and Screening of road base materials, Utilising an in-house fleet of Modern Mobile Crushing and screening plants
- ROM management and crusher feed – supply of loaders with weight load reporting and equipment with rock breaking capabilities
- Road Maintenance – grading, watering, pothole repairs and signage install as well as traffic management
- Construction of new Mine Roads Sealed and Unsealed / Haul Roads
- Boxcut development
- Drill pad establishment and rehabilitation
- Rubbish control and tip maintenance

Current Site Services Contracts

Centrals is a trusted partner in providing critical site services to our mining clients, thereby enabling them to be able to put their focus into the extra ction and processing of the mineral that generates their income. Among our clients who have intrusted us to deliver these critical services include leading mining companies such as EMR at their Golden Grove mine Site, Sandfire Resources at their Degruessa Mine and St Barbara at their Gwalia Mine site.

Combined services include:

- ROM Management/rock breaking/precrush & crusher feed. Mill feed, steel removal, & ore push up
- Site dust Suppression
- Miscellaneous Concrete works
- Installation and rehabilitation of drill pads, sumps and access roads for exploration
- Clean out Mill and sumps
- All maintenance on mine site roads (sealed and unsealed) and carparks
- Waste/controlled waste and tip management, including tip pit design and construction
- Tailings Dam construction
- Camp site maintenance
- Underground road base crushing
- Site Fuel services
- Storm water drainage maintenance and upgrades
- Airstrip and carpark sweeping/maintenance/upgrades
- HDPE pipe installation and welding
- Ore haulage and handling
- Borrow pit establishment and rehabilitation
- Ore haulage and handling
- Miscellaneous Site concrete work
- Miscellaneous Site Fencing as required
- Maintenance wash pads including vacuum suction of sumps
- Maintaining and installation of all site signage and delineators

Mine Site Rehabilitation

Increasing legislative and community demands are being placed on mining companies to progressively and successfully rehabilitate areas that have been disturbed during the mining operation. As such rehabilitation is now a critical component of any successful mining operation.

Being able to successfully rehabilitate a mining site is a specialised skill. Without the correct advice, dedicated design, adequate controls, specialised equipment and skilled operators when undertaking rehabilitation works, then the outcome often results in poor results including the poor vegetation growth outcomes, ongoing erosion problems, high monitoring and compliance costs, and an unsightly area which can generate ongoing community opposition.

Centrals are part of a consortium of rehabilitation specialists who have a shared pride and the passion in being able to delivering outstanding rehabilitation solutions for mining companies. Our role is to not only ensure that exactly what has been designed is delivered onsite, but to also ensure we

- Assist with the location and identification of suitable materials for rehabilitation
- Develop safe and cost effective rehabilitation methodologies
- Provide budget pricing and commercial alternatives proposal to deliver the works
- Provide experienced specialised supervisor and operators to undertake the works
- Provision of the latest machine control technology to manage, deliver and record the actual works that were undertaken
- Provision of specialist seeding and ripping equipment
- Consultation with the local and Traditional Owners to maximise their involvement and ownership of the works

We are the people to engage when you have need to rehabilitate

- Waste Dumps
- Tailing Dam Facilities
- Rom pads and the remains of site facilities
- Roads, drains, access roads and drill pads
- Contaminated Soils
- Borrow pits
- Ongoing problem areas

Civil Construction

Centrals have extensive capacity to execute and deliver road and rail projects throughout Western Australia.

R3 prequalified with Main Roads WA, we can perform works to the highest standards of quality control and safety. Third party certified safety accreditation against AS/NZS4801 OHS Management Systems; ISO certification for quality and environmental systems; AS/NZS ISO 9001;2008 14001.

Whether it be a mine site, major highway or adjacent to live rail, Centrals can undertake the work to the Client's specific requirements.

Sealed Road Construction, Reconstruction and Overlay

- Clearing, topsoil stripping and topsoil stockpiling
- Construction of side tracks
- Foundation preparation
- Bulk earthworks, cut to fill, import to fill and cut to spoil
- Construction of drainage culverts, drainage swale, bunds and floodways
- Bridge demolition, large box culvert installation, deck construction and bridge approaches
- Rock protection to bridge abutments
- Subgrade construction
- Basecourse construction
- Lime, bitumen and cement stabilisation of subgrade and basecourse layers
- Stabilisation repairs to pavements
- Subgrade and basecourse overlays
- Final trim and sealing works
- Installation of road furniture, safety barriers, signs, line marking and guideposts
- Project management and supervision of the entire scope of works
- Traffic Management
- Environmental protection
- Contaminated Site remediation
- Shoulder Grading
- Road sheeting

Construction of Haul and Access roads

- Pioneering works, clearing of grid lines and survey tracks
- Construction of drill pads, drilling access tracks
- Clearing, topsoil stripping and topsoil stockpiling
- Foundation preparation
- Bulk earthworks, cut to fill, import to fill and cut to spoil
- Basecourse sheeting
- Construction of drainage culverts, drainage swale, bunds and floodways
- Installation of signs and guideposts
- Maintenance grading, formation re-sheeting and shoulder grading
- Project management and supervision of the entire scope of works
- Traffic Management
- Environmental protection
- Contaminated site remediation

Existing Rail services contracts

- Construction of new rail formation
- Widening of existing formation embankments and cuttings adjacent to live rail
- Construction of culverts, headwalls and drainage structures
- Laying ballast

- Loading, transportation and delivery of railway sleepers
- Provision of trained operators, labour and certified plant to carry out routine maintenance along the rail formation
- Provision of trained flagmen and rail safety personnel when required

Sustainable Energy Projects (Wind/Solar)

- Location and negotiating access to water and gravel resources required to construct the works
- Maintain and repair local government access roads
- Construct and maintenance of all access roads on the site between the towers
- Construct of all temporary laydown pads, administration area, etc and rehabilitation of the areas at the end of the contract.
- Construction of all crane pads at each tower
- Excavation of all tower foundations to a determined stable foundation level.
- Backfill, compaction, testing and trimming of tower foundations to enable pouring of foundation bases
- Backfill around the tower bases including rehabilitation of disturbed area and placement of aggregate around tower bases.
- Construction of substation pad area including detailed trenching, foundation excavation and backfill and security fencing

Centrals Prequalification's and Certifications

- Main Roads R3
- Landcorp Open Rated
- Water Corporation Prequalified
- Horizon Power Prequalified
- WALGA preferred supplier road building & maintenance, drainage services, erosion control and foreshore protection, streetscape works, mulching
- Rio Tinto Category 1 Supplier civil works
- Lend Lease preferred supplier road building and maintenance
- ATCO Gas preferred supplier mulching services
- Dept of Parks and Wildlife preferred supplier mulching
- ISNetworld/Dampier to Bunbury Pipeline – Category A supplier for the Dampier to Bunbury Natural Gas Pipeline
- FESA preferred supplier
- Downer Mouchel preferred supplier road building and maintenance
- Lend Lease preferred supplier road building and maintenance
- Dept of Parks and Wildlife preferred supplier mulching
- MRWA Traffic Management Accredited Company
- Licensed Asbestos Contractor.

Landcare and Mulching

Centrals essentially have three methods of mulching/slashing options;

- 1** Heavy duty Cat 586c site prep mulching machine – the new CAT 586c Site Prep Tractor raises the bar on land clearing/ mulching having one of the only CAT 586c site prep mulching machines in the southern hemisphere.
- 2** Rear mounted flail tooth heavy duty mulchers.
- 3** Skid steer front mounted 418C fixed tooth mulcher for the tight areas and steep embankments
- 4** Standard trailing slashers.

Centrals have rear mounted and reach-arm slashes for aerial roadside control or alternatively standard trailing slashers. The reach-arm at 1.8 3PL slasher at 2.2 and a 6m towed option. The side mounted, re-charm is ideal for those hard to reach areas, drains, banks and floodway's. All operators are competent and have complete VOC certificate for the various machines. Fire units are on all support vehicles and have all Main Road clearances

The Centrals Vegetation Management team prides itself on its safe culture, customer satisfaction and public safety.

Mulching, Vegetation and Landcare Management, Fire Mitigation and installation of Trafficable Fire Breaks and Access Tracks

Centrals Mulching & Vegetation Services offer a variety of vegetation management options outlined below;

- Tractors specifically designed to tackle the heaviest vegetation and versatile enough to still complete small roadside mulching and clearing activities, as well as creating new tracks to assist in controlled burns and emergency access.
- Reach arm tractors designed for roadside tree and grass slashing, tree pruning and power line vegetation management. The reach arm can be run in conjunction with our mulching tractors for a complete one pass; and
- Mulchers that have proven to be a substantial improvement on traditional 'bare earth' clearing. The finished product provides excellent ground coverage for access roads, firebreaks and dust suppression.

One of the main benefits of the mulching unit is that cleared vegetation can be driven on immediately by light vehicles or heavy plant with minimal risk of punctures due to the unit's unique swinging tooth configuration

Current clients; DBNGP; ATCO Gas; BHP Petroleum; DFES state wide; DPAW state wide; WALGA/Local Government's state wide.

Safety and Environment

Our Commitment

We have worked hard to achieve and maintain third party certification in the following internationally recognised management systems standards:

- AS/NZS ISO 9001:2008 for Quality Management Systems;
- AS/NZS 4801:2001 for Occupational Health and Safety Management Systems; and
- AS/NZS ISO 14001:2004 for Environmental Management Systems.

We offer a service as a principal contractor and have controls that other regionally based earthmoving companies don't have.

Safety is at the forefront of our processes. Recognising that there are hazards in our industry, Centrals has taken every practicable step to provide and maintain a safe and healthy work environment for all employees, subcontractors, visitors and other stakeholders.

Centrals maintain environmental standards consistent with development in technology, industry codes of practice and all relevant statutory requirements. A major component of this is the education of employees and subcontractors in their individual roles in pollution prevention and risk minimisation.

Our certified management system standards include:

- AS/NZS ISO 9001:2008 Quality
- AS/NZS 4801:2001 Health & Safety
- AS/NZS ISO 14001:2004 Environment
- Federal Safety Accreditation 484
